Test 3

LISTENING

PART 1 *Questions 1–10*

Questions 1–4

Complete the form below.

*Write **ONE WORD AND/OR A NUMBER** for each answer.*

Wayside Camera Club membership form		
Name:		Dan Green
Email address:	*internet*	dan1068@market.com
Home address:	*advertisement* *agency / agent* *magazine*	52 **1** ...**Marrowfield**... Street, Peacetown
Heard about us:	*newspaper* *friend / relative* *radio*	from a **2** ...**relative**...
Reasons for joining:	*website* *blog*	to enter competitions to **3** ...**socialise / socialize**...
Type of membership:		**4** ...**full**... membership (£30)

Well, I also like to socialise with other photographers.

It's £30 a year for full membership or £20 a year if you're an associate(准会员/副会员). can't vote in meetings

Questions 5–10

Complete the table below.

*Write **NO MORE THAN TWO WORDS** for each answer.*

Photography competitions		
Title of competition	**Instructions**	**Feedback to Dan**
5 '...**Domestic Life**...' 家庭生活	A scene in the home 场景，现场；情节；布景；景色	The picture's composition was not good. *too busy*
'Beautiful Sunsets'	Scene must show some **6** ...**clouds**...	The **7** ...**timing**... was wrong.
8 '...**Animal Magic**...'	Scene must show **9** ...**movement**...	The photograph was too **10** ...**dark**... .

The instructions were to capture the clouds as well it couldn't just be blue sky and a setting sun

waited a bit longer to get the shot. So the timing wasn't right. Yes — I took it too soon, basically

at night and, it was a bit dark

That's what we had to show – there had to be some movement in the scene.
（发音是 *movements*）
但实际*movement* 在此句中作为 动作，动态，抽象概念，不可数名词
He made three sudden movements … 可数名词

p. 123 p. 109

PART 3 *Questions 21–30*

I haven't seen you for a bit, Marie.
No. I've been busy with my project.
You're making a vegan alternative to eggs, aren't you?
Something that doesn't use animal products?
Yes. I'm using chickpeas(鹰嘴豆). I had two main aims when I first started looking for an alternative to eggs, but actually I've found chickpeas have got more advantages.
Right.

Questions 21 and 22

*Choose **TWO** letters, **A–E**.*

great feeling / pleased

Which **TWO** things did Colin find most satisfying about his bread reuse project?

Ⓑ Ⓓ

A receiving support from local restaurants *I'm hoping…*
B finding a good way to prevent waste *a great feeling to…*
C overcoming problems in a basic process *straightforward*
D experimenting with designs and colours *…I was really pleased with what I managed to produce*
E learning how to apply 3-D printing *used that before*

Questions 23 and 24

*Choose **TWO** letters, **A–E**.*

Which **TWO** ways do the students agree that touch-sensitive sensors for food labels could be developed in future? ***might be / maybe / possible / will***

Ⓐ Ⓔ

A for use on medical products *might be*
B to show that food is no longer fit to eat
C for use with drinks as well as foods
D to provide applications for blind people *start off as…*
E to indicate the weight of certain foods *maybe*

But how about your project on reusing waste food – you were looking at bread, weren't you?
Yes. It's been hard work, but I've enjoyed it. The basic process was quite straightforward – breaking the stale (adj.（食物）不新鲜的) bread down to a paste(面糊,粘贴)then reforming it.
But you were using 3-D printing, weren't you, to make the paste into biscuits?
Yeah, I'd used that before,

but in this project, I had time to play around with different patterns for the biscuits and finding how I could add fruit and vegetables to make them a more appetising colour, and I was really pleased with what I managed to produce.
It must've been a great feeling to make something appetising out of bits of old bread that would've been thrown away otherwise.
It was. And I'm hoping that some of the restaurants in town will be interested in the biscuits. I'm going to send them some samples.

I came across something on the internet yesterday that might interest you. It was a company that's developed touch-sensitive sensors for food labels.
It's a special sort of label on the food package. When the label's smooth, the food is fresh and then when you can feel bumps(凸起, 碰撞) on the label, that means the food's gone bad.
It started off as a project to help visually impaired people know whether food was fit to eat or not.
Interesting.
So just solid food? No, things like milk and juice as well.

But actually, I thought it might be really good for drug storage in hospitals and pharmacies.(药房)
Right. And coming back to food, maybe it'd be possible to use it for other things besides freshness.
Like how many kilograms a joint(一块肉) of meat is, for example.
Yes, there's all sorts of possibilities.

C19T1P4

PART 4 *Questions 31–40*

Complete the notes below.

*Write **ONE WORD ONLY** for each answer.*

Céide Fields

- an important Neolithic archaeological site in the northwest of Ireland
  新石器时代 考古学的

Discovery

20 世纪 30 年代 *Patrick Caulfield* *rows of stones*

- In the 1930s, a local teacher realised that stones beneath the bog surface were once **31** ....**walls**.

He realised that these must be walls

- His **32** ....**son**.... *Seamus* became an archaeologist and undertook an investigation of the site:
  - a traditional method used by local people to dig for **33** ....**fuel** 燃料.... *for finding fuel buried in the bog for thousands of years.*
    iron probes into the bog to map the formation of the stones was used to identify where stones were located
  - carbon dating later proved the site was Neolithic.
- Items are well preserved in the bog because of a lack of **34** ....**oxygen**.... .
  extremely well-preserved *Objects remain so well preserved in these conditions because of the acidity of the peat and the deficiency of oxygen.* 泥炭的酸性和氧气的匮乏

A bog is 90 percent water; its soil is so saturated (湿透的,饱和的)that when the grasses and heathers (石南属植物)that grow on its surface die, they don't fully decay but accumulate in layers.

abundance /abundant
adequacy /adequate
sufficiency- deficiency
Sufficient - Deficient

Neolithic farmers

These weren't round as people often assume, but rectangular

- Houses were **35** ....**rectangular**.... in shape and had a hole in the roof.
- Neolithic innovations include:
  - cooking indoors *The pots were used for many things; as well as for storing food, pots were filled with a small amount of fat and when this was set alight, they served as lamps.*
  - pots used for storage and to make **36** ....**lamps**.... .
- Each field at Céide was large enough to support a big **37** ....**family**.... .
  a suitable size to sustain an extended family.
- The fields were probably used to restrict the grazing of animals – no evidence of structures to house them during **38** ....**winter**.... .

This must have been a year-round activity as no structures have been found which would have been used to shelter animals in the winter.

由于没有发现用于牲畜冬季栖息的建筑，因此这种轮牧活动肯定是全年进行的

Reasons for the decline in farming

several factors

- a decline in **39** ....**soil**.... quality *The soil would have become less productive and led to the abandonment of farming.*
- an increase in **40** ....**rain**....

But there were also climatic pressures too. The farmers at Céide would have enjoyed a relatively dry period, but this began to change and the conditions became wetter as there was a lot more rain.
